SUMMARY

Software Engineer in Test with 3+ years of experience building test automation platforms and delivering end-to-end stress testing for large-scale distributed systems at Netease Games. Proficient in Python with hands-on expertise in designing custom test frameworks, CI/CD pipeline integration, test infrastructure development, and deploying tooling services on AWS for monitoring and performance analysis of production environments. Experienced in applying LLM-based tools to automate test workflows. Proven ability to work cross-functionally with diverse project teams and coordinate overseas collaborations.

WORK EXPERIENCE

Netease Games <i>Software Development Engineer in Test</i>	Shanghai, China July 2021 – Aug. 2024
- Led end-to-end server stress testing across 10+ game projects including <i>Marvel Rivals</i> and <i>Dead by Daylight Mobile</i>, covering test case design, script development, execution, and bottleneck analysis, simulating up to 2M concurrent players with QPS up to 2000. - Analyzed server performance metrics including API latency, response correctness, middleware CPU/memory utilization, database slow queries, and error logs, resolving 30+ high-level risks per project through performance profiling, and driving autoscaling optimizations that cut cloud infrastructure costs by 70%. - Built a multi-agent LLM system to automatically generate structured test case documents from game design docs, achieving 90%+ test point coverage versus manual baselines and reducing per-document authoring time by 95%. - Operationalized an extracted UE network library to replace headless clients for stress testing, cutting resource overhead by 90% and developing surrounding adaptation tooling that accelerated the testing workflow by 80%. - Established server performance monitoring platforms for multiple game teams using Prometheus, Grafana, and AWS CloudWatch, providing real-time visibility into production and test environments. - Developed and maintained internal workforce management systems using Spring Boot and Vue.js, visualizing departmental efficiency metrics and streamlining team resource allocation.	

PERSONAL PROJECTS

AI-Powered Resume Generation System <i>LangChain, FastAPI, PostgreSQL, Vue.js</i>	London, ON Jan. 2026 – Apr. 2026
- Built a multi-agent LangChain pipeline that parses user profiles, ranks experiences against job descriptions via a dual-track scoring system combining weighted regex matching with LLM semantic analysis, and generates tailored resume drafts. - Designed a two-phase chunked extraction strategy with Chain-of-Thought prompting, eliminating the 30% data truncation rate observed under API-enforced structured output mode. - Implemented a three-tier diagnostic cascade from rule checks to skill gap analysis to keyword injection, with a closed loop that verifies every user edit against the original profile before rescoreing. - Reduced LLM token consumption by 60% through pre-computed summary indexing and Top-K context pruning, compressing the experience context window from linear to constant size.	
Performance-Optimized Blog System <i>FastAPI, MongoDB, Redis, Prometheus</i> GitHub	London, ON Sept. 2025 – Dec. 2025
- Built a blog platform with FastAPI and Vue.js, using MongoDB to handle nested comment threads and text-heavy content storage. - Set up monitoring with Prometheus and Grafana, and used Locust to load-test the system to locate bottleneck. - Optimized slow MongoDB queries and added Redis caching based on profiling results, cutting API response time by 90% and reducing memory usage to 20% of its original level. - Containerized the application with Docker and deployed to AWS EC2, with automated CI/CD pipelines via GitHub Actions for testing and deployment on every push.	

EDUCATION

Western University <i>Master of Science in Computer Science</i>	London, ON, Canada Jan. 2025 – May. 2026
New York University <i>Master of Science in Computer Engineering</i>	New York, NY, USA Sep. 2019 – Jun. 2021
University of Science and Technology Beijing <i>Bachelor of Engineering in Computer Science</i>	Beijing, China Sep. 2015 – Jun. 2019

TECHNICAL SKILLS

Languages:	Python, Java, Go, JavaScript, SQL (PostgreSQL, MySQL)
AI:	LLM Agents, RAG, LangChain, LangGraph, Pydantic, LLM Evaluation
Frameworks:	Spring Boot, FastAPI, Vue.js, Node.js, Docker, Kubernetes, AWS
Data & Observability:	Redis, Kafka, MongoDB, Prometheus, Grafana
